

Checklist for clinical pictures

1. Lower face (under the eyes)
2. Profile
3. Fold-to-fold
4. Bites
5. Jaws
6. Mallampati (Instruct the patient to open their mouth wide and extend their tongue outward to provide a clear view of the uvula)
7. Modified Mallampati (Instruct the patient to open their mouth wide while keeping their tongue in a relaxed, neutral position)

Lower face (under the eyes)	
Profile	

Fold-to-Fold	
Bites	

Jaws	
Mallampati Clinical Image: A visual assessment tool used to evaluate the risk of Obstructive Sleep Apnea by examining how much the patient's tongue obstructs the airway. The image is obtained by asking the patient to open their mouth wide and stick out their tongue, providing a clear view of the uvula and surrounding structures.	 w

Modified Mallampati Clinical Image: A visual assessment used to evaluate the position of the tongue relative to the surrounding structures.

The image is captured by asking the patient to open their mouth widely while keeping their tongue in a neutral position.
